## Telemetry Data

# RioConnect - Accessing Telemetry Data

- 1 From the Machine Status page, click on the Telemetry tab at the top of the screen.

This section provides a deep dive into the real-time and historical performance data of your machine.

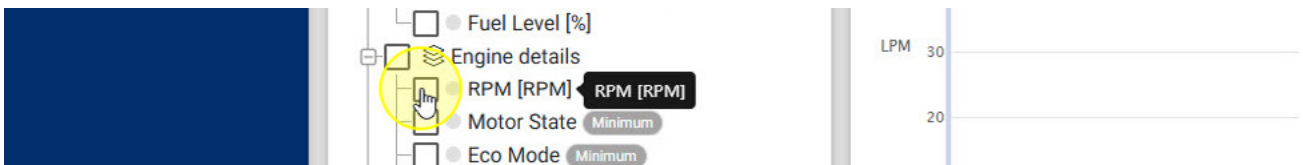

# RioConnect - Selecting Data Points

On the left-hand side, you can toggle specific data points to be displayed on the graphs. While RioConnect provides a recommended default selection, you can customise this by checking or unchecking the boxes:

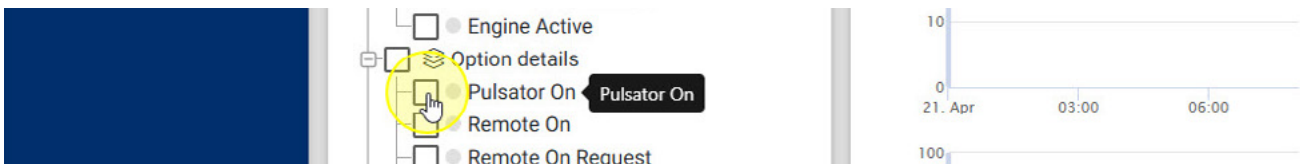

- 2 Machine Data:** Monitor high-pressure (HP) bar, litres per minute (LPM), water and fuel levels, hose length, and water/cooling temperatures.

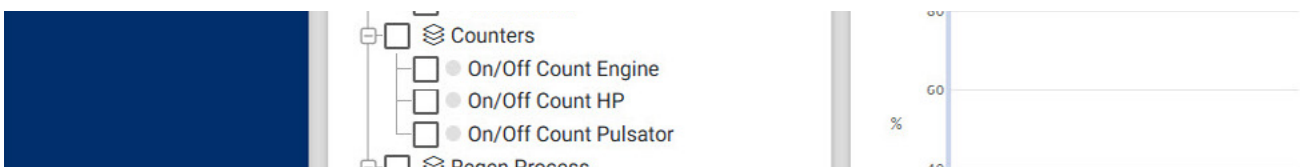

- 3 Engine Details:** Track RPM and motor state.

- 4 Option Details:** Check the status of the pulsator, remote control, vacuum, and more.

- 5 Counters:** View on/off counts for the engine and HP pump.

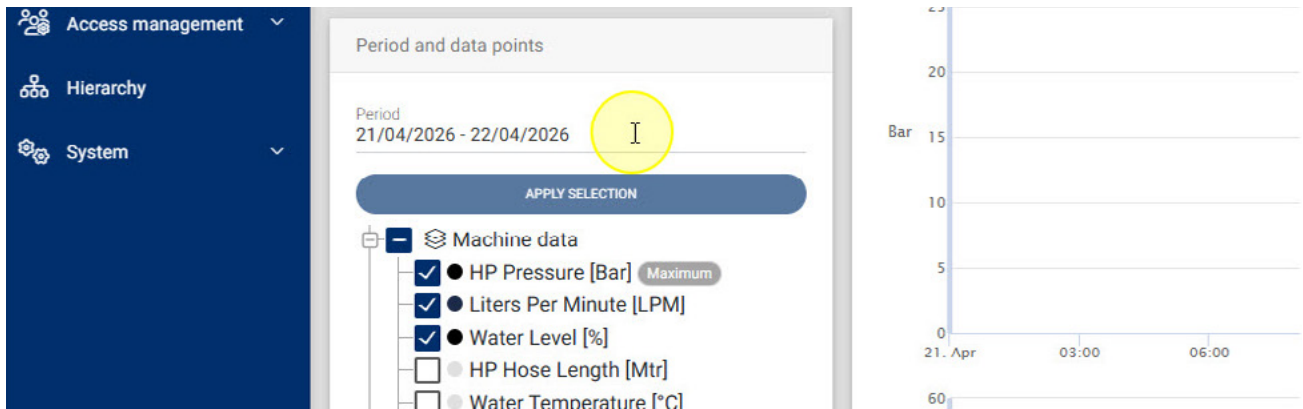

- 6 Selection:** Once you've chosen your metrics, click Apply Selection to update the charts.

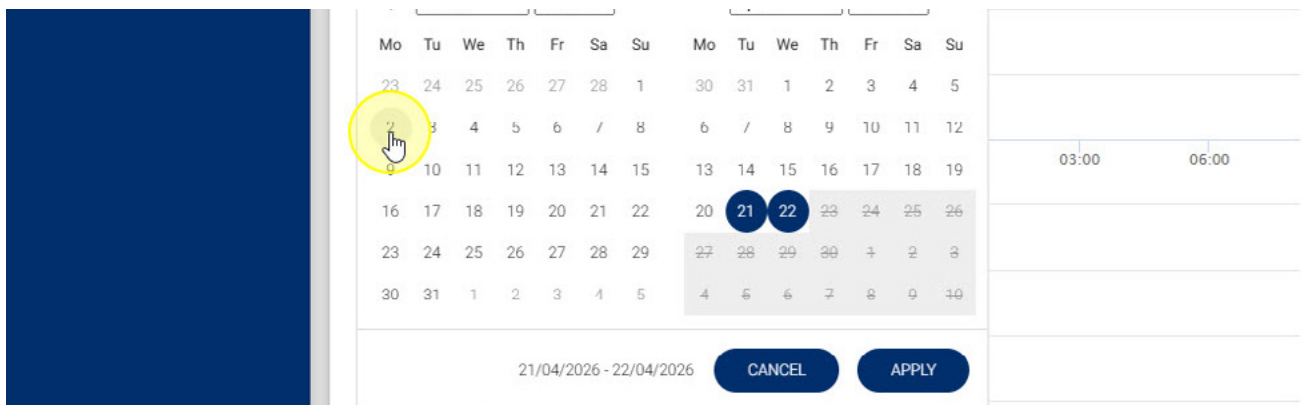

# RioConnect - Filtering by Time Period

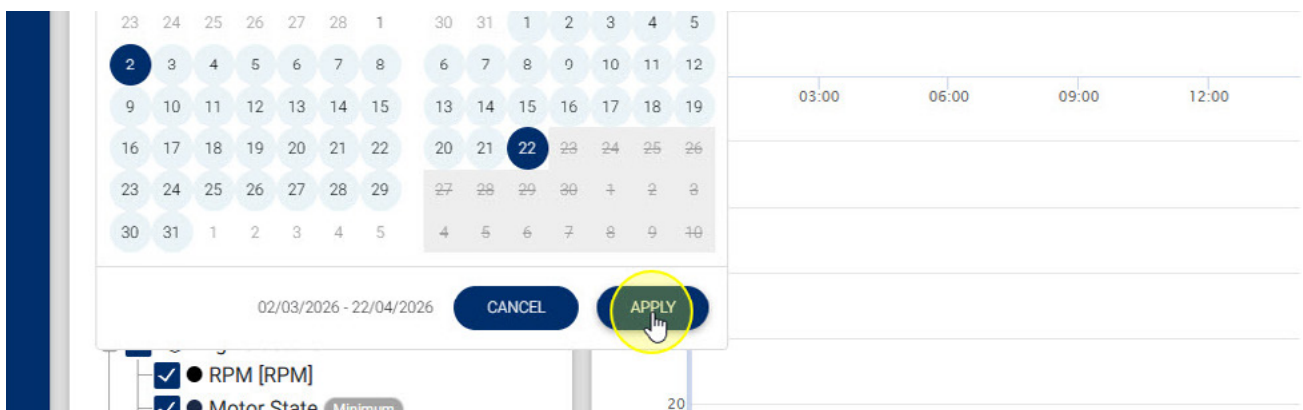

**7** Navigate to the Period and Data Points menu.

**8** Click the date range to open a calendar. Select your desired start and end dates (e.g., the last three weeks).

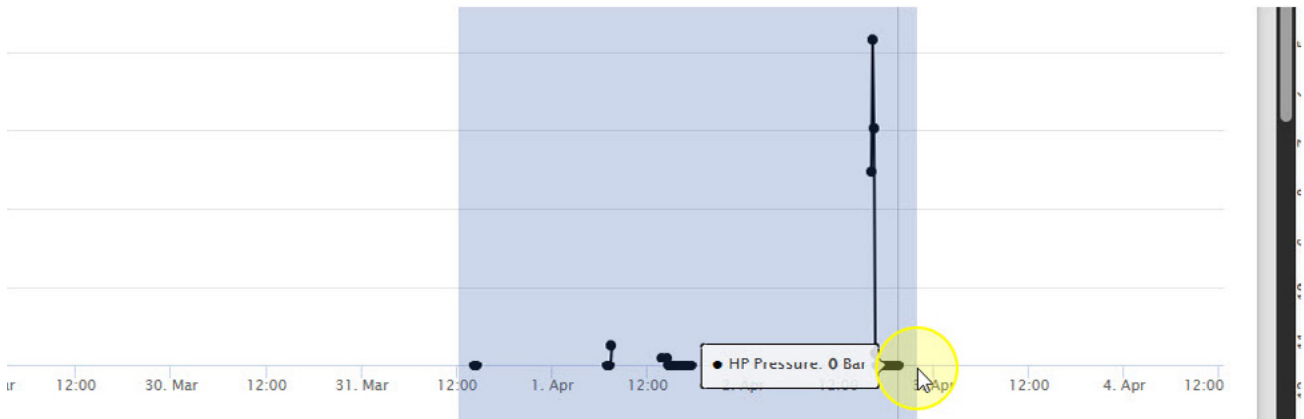

**9** Click Apply to refresh the data view for that specific timeframe.

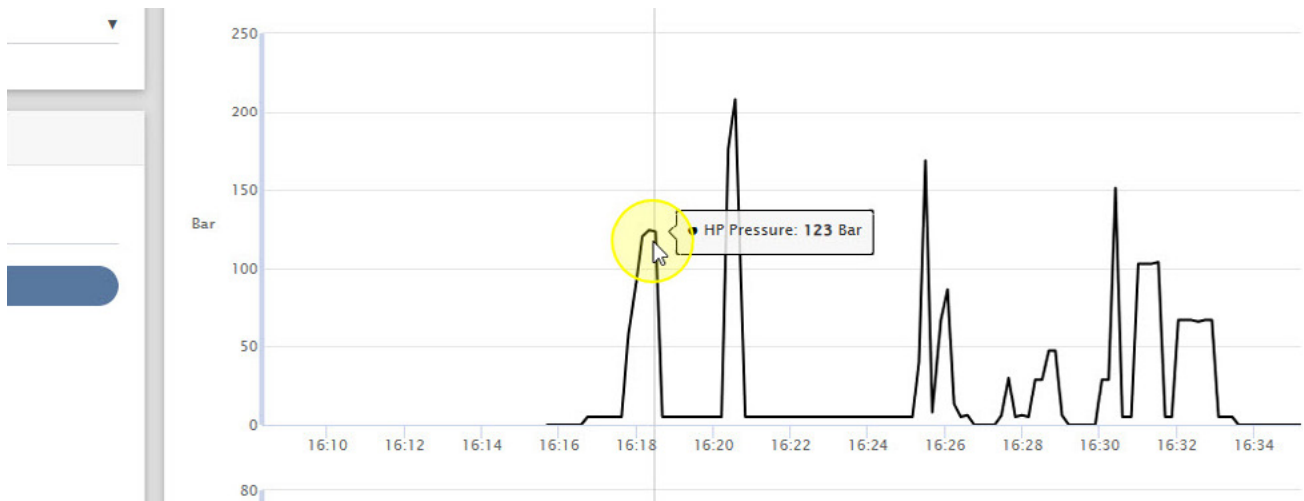

# RioConnect - Analysing The Graphs

The interactive graphs allow for precise analysis of machine usage:

- 10 Zooming In:** To look at a specific event (like a sudden drop in water level or a spike in pressure), click and drag your cursor over the desired section of the graph.

- 11 Data Reading:** Hover your cursor over any point on the line to see the exact values (e.g., "186 Bar at 57 LPM"). This helps you verify if the machine was being operated within its optimal parameters.

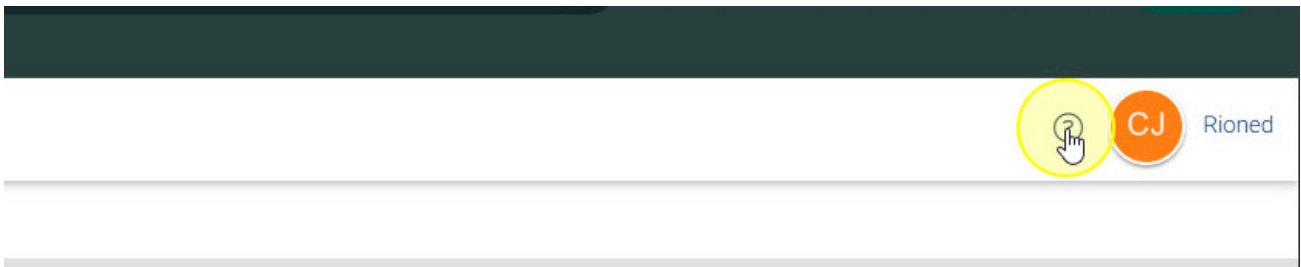

## Real-World Application

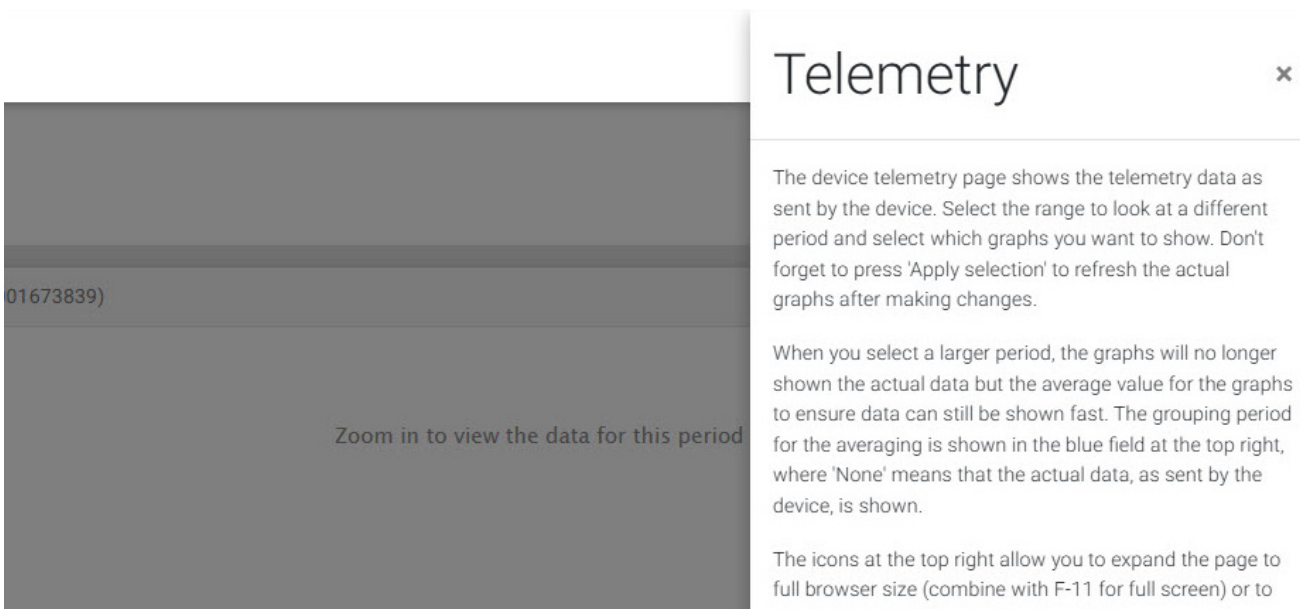

By combining different metrics (like HP Bar and Water Level), you can see exactly how much water was consumed during a high-pressure task, allowing for better job planning and diagnostic troubleshooting.

# RioConnect - Help View

- 12 Click the Question Mark (?) icon located in the top-right corner of the screen.

- 13 RioConnect will automatically display contextual help based on exactly what you are viewing at that moment.

This is the fastest way to get detailed explanations for specific buttons or data points on your current dashboard.
