

THE JETVAC RANGE.

Jetting + Suction Combination Units

ONE JETVAC RANGE. EVERY CHALLENGE.

Built on decades of jetvac combination tanker engineering and the success of Rioned's compact combi units, the updated range delivers a comprehensive line-up of high-performance jetting and vacuum tankers.

From the compact CityCom, to the versatile FlexCom, and our flagship MaxCom, every unit is engineered to handle routine maintenance, blockage clearance, gully emptying and waste recovery across drainage networks.

EXPERT MANUFACTURE

Designed and manufactured at Rioned's facility in The Netherlands, every unit is built on decades of jetvac expertise to deliver consistent performance.

TRUSTED GLOBALLY

Proven in operation across Europe, Asia and the Americas, the Com range is trusted by operators worldwide to deliver in demanding environments.

MAXCOM.

18-tonne Jetvac Combination Tanker

The MaxCom jetvac combination unit is designed for demanding urban environments where access, manoeuvrability and consistent performance matter. Built on a robust 18-tonne platform, it delivers the highest levels of jetting and vacuum capability within the Com range.

Balancing high-output jetting and powerful vacuum performance, the MaxCom tanker allows operators to work efficiently in built-up areas without sacrificing control or safety. Durable tank construction, intelligent controls and remote operation ensure consistent performance across a wide range of applications, from routine maintenance to blockage clearance, gully emptying and waste recovery.

MAXCOM
AT A GLANCE

Max Power for Demanding Operations

MAN TGM 18.320 4x2 chassis providing a robust and reliable platform.

High-output jetting performance via SPECK / Rioned P55 pump delivering 200 bar at 100 l/min.

Powerful vacuum performance via Jurop DL180 HDR blower delivering 17,600 l/min (1,056 m³/hr) airflow.

8000 litre corrosion-resistant split tank (7000L waste / 1000L clean water).

PTO-driven system ensuring efficient and consistent performance.

eControl+ intelligent control system for centralised operation of engine, pumps and reels.

11-channel RioMote remote control providing full operational control from a distance.

Dedicated jetting, suction and filling reels and integrated lockable storage for efficient organisation.

Flexibility where it matters.

FLEXCOM.

7.5t, 10t or 12t Jetvac Combination Tanker

The FlexCom jetvac combination unit is designed for urban environments where flexibility and access are essential. Compact and highly manoeuvrable, it allows operators to carry out jetting and suction work efficiently in narrow streets, confined spaces and locations that larger tankers cannot reach.

Mounted on a choice of lightweight chassis, the FlexCom combines powerful jetting and dependable vacuum capability in a compact, adaptable platform. A configurable tank layout allows operators to adjust water and debris capacity to suit the job, while intelligent controls and remote operation provide safe, precise handling on site.

FLEXCOM
AT A GLANCE

Compact Flexibility, Everyday Performance

Available on 7.5, 10 or 12-tonne chassis, providing flexibility across different fleet requirements.

Range of high-pressure jetting performance options, delivering 160 bar at 130 l/min as standard.

Powerful vacuum performance, providing approx. 8200 lpm (492 m³/hr) for efficient debris removal.

Up to 3750 litre configurable tank with adjustable partition to balance clean and waste capacity.

PTO-driven operation delivering efficient pump performance from the vehicle drivetrain.

eControl+ intelligent control system for centralised management of key functions.

11-channel RioMote remote control enabling safe operation from a distance.

Hydraulically operated hose reels and integrated storage for efficient workflow on site.

Balanced for everyday jobs.

RIOCOM.

7.5-tonne Jetvac Combination Tanker

The RioCom jetting and vacuum combi unit is designed to deliver a balance of performance, capacity and manoeuvrability for urban and municipal drainage operations. Positioned at the centre of the Com range, it provides the capability required for routine maintenance and reactive work while maintaining access in built-up environments.

Delivering high-pressure jetting and high-capacity vacuum performance, the RioCom supports efficient working across a wide range of applications, from blockage clearance to gully emptying and waste recovery. With durable tank construction, intuitive controls and remote operation, it enables safe, consistent performance across demanding day-to-day operations.

RIOCOM
AT A GLANCE

Proven Power. Guaranteed Reliability

Mounted on a 7.5-tonne chassis, suited to urban and municipal drainage operations.

High-pressure jetting performance options, delivering a standard 200 bar at 72 l/min for effective cleaning.

High-capacity vacuum performance, providing up to 8200 l/min, 492 m³/hr for efficient waste removal.

Split 3000 litres tank (1000 clean - 2000 waste) for effective clean and waste management.

PTO-driven system ensuring low-cost, fuel-efficient and reliable pump operation.

eControl+ intelligent control system for centralised control of engine, pumps and reels.

RioMote remote control enabling safe and precise operation from a distance.

Lockable and shuttered storage on both sides of the unit for secure and easy-to-use tool and hose storage.

Built for the tightest access.

CITYCOM.

6-tonne Jetvac Combination Tanker

The CityCom combination unit is specifically designed for limited-height environments, such as underground car parks, where access to drainage networks is critical. Compact, agile and easy to operate, it enables operators to carry out essential drainage work in areas that larger combination units cannot reach.

Providing effective jetting and dependable vacuum performance within a lightweight platform, the CityCom is ideal for routine maintenance, blockage clearance and small-scale waste recovery. With intuitive controls and remote operation, it delivers safe, efficient performance in restricted access locations.

CITYCOM
AT A GLANCE

Build to access height-restricted areas

Compact, low-clearance design with reduced height option for car park access.

High-pressure jetting performance delivering up to 200 bar at 60 l/min for effective drain cleaning.

Compact vacuum performance providing 7200 lpm, 432 m³/hr airflow for light debris and waste removal.

Compact tank configuration (1700 litre dirty water tank and 600 litre clean water tank)

PTO-driven system ensuring efficient, reliable pump operation from the vehicle engine.

eControl+ control system for simple, centralised operation of key functions.

RioMote remote control enabling safe, single-operator use from a distance.

Integrated hose reels and secure storage for efficient handling and organisation on site.

Compact power on demand.

UNICOM.

4.5, 5.5 and 7.5-tonne Jetvac Combination Units

Designed to deliver reliable, high-performance drain cleaning in a compact and versatile format, the UniCom provides a practical solution for routine jetting and suction across domestic, commercial and light municipal applications.

The UniCom range is available in two configurations to suit different operational needs. The UniCom Basic features a highly compact design, allowing installation on 4.5 or 5.5-tonne chassis, trailers or within enclosed vans for maximum flexibility. The UniCom Standard offers a more integrated, higher-capacity solution for operators requiring increased performance and on-board capability.

UNICOM
AT A GLANCE

Compact Power. Flexible Installation.

UniCom Basic – ultra-compact design suitable for 4.5–5.5 tonne chassis, trailers or within vans.

UniCom Standard – larger, integrated unit designed for dedicated vehicle installation up to 7.5-tonne.

High-performance petrol or diesel engine options providing self-contained, reliable power.

High-pressure jetting performance delivering up to 200 bar at 45 l/min for effective drain cleaning.

Powerful vacuum performance, providing up to 5400 l/min, 300 m³/hr for efficient gully cleaning.

Flexible mounting options enabling deployment as a chassis-mounted system, trailer unit or van-pack.

Split tank configuration with 1500L capacity (1000L waste / 500L clean), with alternative layouts available.

Configurable layout with a wide range of options including remote control and hydraulic hose reels.

Delivering results in tight spaces.

SUCTION TRAILERS.

Versatile, Customisable Vacuum Units

Rioned's suction trailer range deliver powerful vacuum performance in compact, highly manoeuvrable units. Built for operation in restricted height environments, these reliable units provide an effective solution for emptying flooded areas, septic tanks, grease traps and heavily polluted drainage systems.

With a low overall height and compact footprint, both configurations can operate in basements, underground car parks and confined urban locations. The range includes two options to suit different operational needs: a standard trailer-mounted unit for straightforward deployment, and the RioTrailer R2, offering increased flexibility with the ability to be mounted on a trailer, vehicle chassis or used as a standalone unit.

R1 + R2
AT A GLANCE

Compact suction. Maximum access.

RioTrailer R1: A trailer-mounted solution designed for reliable day-to-day suction tasks.
RioTrailer R2: A more versatile configuration that can be deployed as a standalone system.

High-performance vacuum system delivering 7200 l/min (432 m³/hr) for continuous operation.

2100L tank capacity providing ample volume for most suction and waste recovery tasks.

Honda 20HP petrol engine driving a Jurop PNR73 vacuum pump for reliable performance.

Fully opening rear tank door for easy cleaning and removal of solids.

Integrated hose reel with 25m suction hose for immediate deployment.

Double float and siphon system protecting the pump from contamination.

On-board storage solutions for hoses, tools and accessories.

PROVEN IN PRACTICE.

Trusted by customers around the world to deliver consistent results, day in and day out.

"The jetvacs are sleek, compact and low weight. Operating single resolution units helps minimise downtime and speed operations."

SAPPHIRE UTILITY SOLUTIONS

"On one occasion we cleared silt from a 350m line in a single run. We added to the hose length to accomplish it, but the unit will handle 250m runs all day."

MDL PLANT

"Whereas before we needed to rely on the availability of a 25t tanker to perform suction work, the new units will be able to carry out both jetting and suction work with a single visit. It's a really good bit of kit and will enable the team to do more and provide better customer service."

SCOTTISH WATER

"The tanker helps us to achieve a safe, fast and cost-effective solution to moving waste around. The unit has worked every day since delivery. It's been pushed to its limits and performed better than we ever imagined!"
